

### DUAL OP AMP AND VOLTAGE REFERENCE

#### Description

The AP4310E is a monolithic IC specifically designed to regulate the output current and voltage levels of switching battery chargers and power supplies

The device contains two Op Amps and a 2.5V precision shunt voltage reference. Op Amp 1 is designed for voltage control with its non-inverting input internally connected to the output of the shunt regulator. Op Amp 2 is for current control with both inputs uncommitted. The IC offers the power converter designer a control solution that features increased precision with a corresponding reduction in system complexity and cost. AP4310E has more stringent reference voltage tolerance and offset.

The AP4310E is available in standard package of SO-8.

#### Applications

- Battery Charger
- Switching Power Supply

and Lead-free.

### **Pin Assignments**

SO-8

### Features

#### **OP** Amp

- Input Offset Voltage: 0.5mV
- Supply Current: 75µA per OP Amp at 5.0V Supply Voltage
- Unity Gain Bandwidth:1MHz
- Output Voltage Swing: 0 to V<sub>CC</sub>-1.5V
- Power Supply Range: 3 to 36V

#### Voltage Reference

- Fixed Output Voltage Reference: 2.5V
- Reference Voltage Tolerance: ±0.4%
- Sink Current Capability: 0.05 to 80mA
- Typical Output Impedance: 0.2Ω
- Totally Lead-free & Fully RoHS Compliant (Notes1 & 2)
- Halogen and Antimony Free. "Green" Device (Note 3)

Notes:

- No purposely added lead. Fully EU Directive 2002/95/EC (RoHS) & 2011/65/EU (RoHS 2) compliant.
  See http://www.diodes.com/quality/lead\_free.html for more information about Diodes Incorporated's definitions of Halogen- and Antimony-free, "Green"
- 3. Halogen- and Antimony-free "Green" products are defined as those which contain <900ppm bromine, <900ppm chlorine (<1500ppm total Br + Cl) and <1000ppm antimony compounds.

# **Typical Applications Circuit**

Application of AP4310E in a Constant Current and Constant Voltage Charger

# **Functional Block Diagram**

### Absolute Maximum Ratings (Note 4)

| Symbol            | Parameter  | Rating                       | Unit |
|-------------------|--|------------------------------|------|
| V <sub>CC</sub>   | Power Supply Voltage (VCC to GND)                | 40                           | V    |
| VIN               | Op Amp1 and 2 Input Voltage Range (Pins 2, 5, 6) | -0.3 to V <sub>CC</sub> +0.3 | V    |
| VID               | Op Amp 2 Input Differential Voltage (Pins 5, 6)  | 40                           | V    |
| Ιĸ                | Voltage Reference Cathode Current (Pin 3)        | 100                          | mA   |
| PD                | Power Dissipation (T <sub>A</sub> =+25°C)        | 500                          | mW   |
| TJ                | Operating Junction Temperature                   | +150                         | °C   |
| T <sub>STG</sub>  | Storage Temperature Range                        | -65 to +150                  | °C   |
| T <sub>LEAD</sub> | Lead Temperature (Soldering 10sec)               | +260                         | °C   |

Note 4: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

# Recommended Operating Conditions (Note 5)

| Parameter           | Min | Max  | Unit |
|---------------------|-----|------|------|
| Supply Voltage      | 3   | 36   | V    |
| Ambient Temperature | -40 | +105 | °C   |

Note 5: Qualified for SMD on the underside of a PCB by processing the PCB through a wave soldering operation.

#### LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

- A. Life support devices or systems are devices or systems which:
  - 1. are intended to implant into the body, or
  - 2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
- B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
